This analysis method is basically a linear programming-based technique used in the most optimal manner; DEA uses this information to construct efficiency. Data envelopment analysis (DEA) is a nonparametric method in operations research and economics for the estimation of production frontiers. It is used to empirically measure productive efficiency of decision making units (or DMUs). Although DEA has a strong link to production theory in economics, the tool is Some 30 years ago DEA (and frontier techniques in general) set out to.
